

Quiz 1-2

Identify the parent graph

1-3: Transformations from parent functions

Objectives:

- I can identify transformations algebraically and graphically

x Domain changes
y Range changes

$$y = \pm a f(\pm b(x \pm c)) \pm d$$

(x+2) left 2
± if (-) reflection over x-axis
a vertical expansion or compression
 a > 1 expansion
 a < 1 compression
± if (-) reflection over y-axis
b horizontal expansion or compression
 0 < b < 1 expansion
 b > 1 compression
c translation left or right
 (+) left (-) right } x's lie
d translation up or down
 (+) up (-) down

$$y = \pm a f(\pm b(x \pm c)) \pm d$$

reflect x-axis ↓ V.S. (y)
reflect y-axis ↓ H.S. (x)
For L ↓ x's lie
U or D ↓

Information to remember about
transformations....

x's lie

any change to the domain (x's) is opposite of what
appears in the equation

Determine the parent function, then describe the
transformations:

$$1. y = -2|x - 3| + 1$$

- reflect x-axis
- V.S. by 2
- right 3
- up 1

$$3. y = \frac{-\sqrt{x-4}}{3}$$

$$2. y = 2 \bullet 2^{x+3}$$

- V.S. by 2
- left 3

$$4. y = (x - 5)^2$$

- right 5

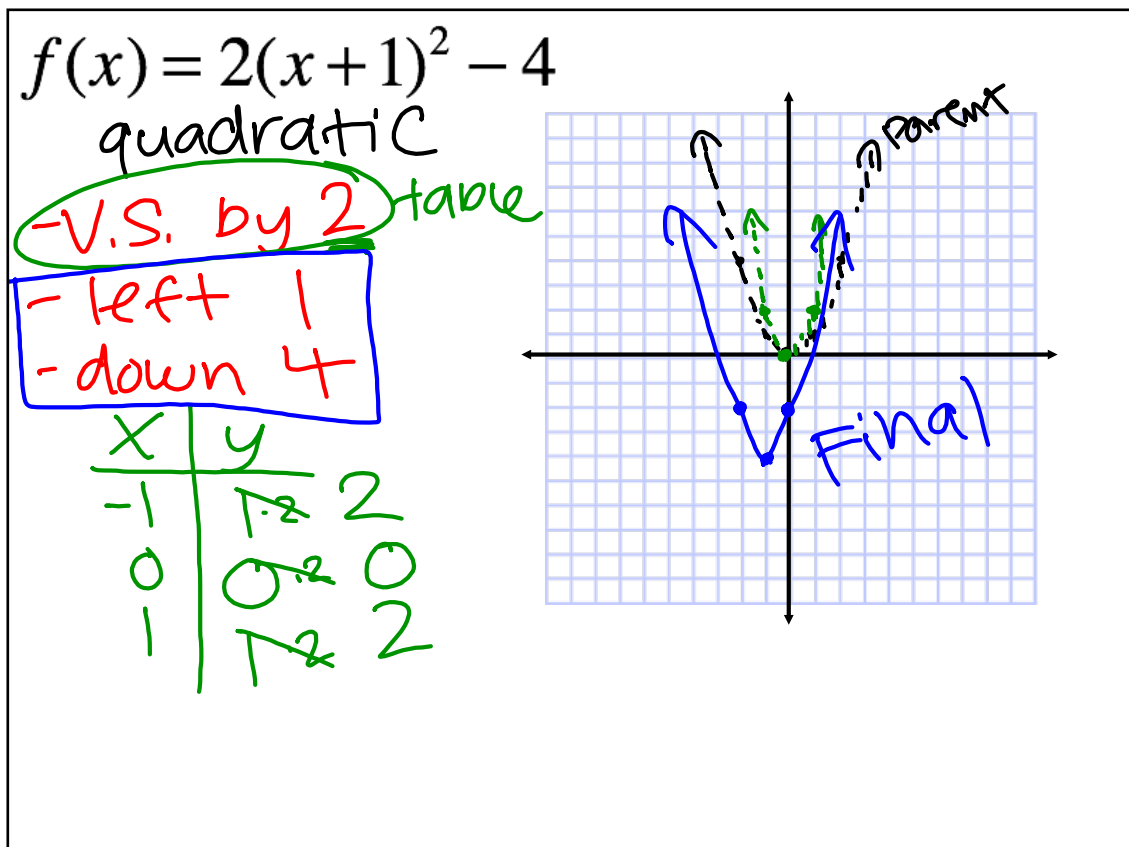

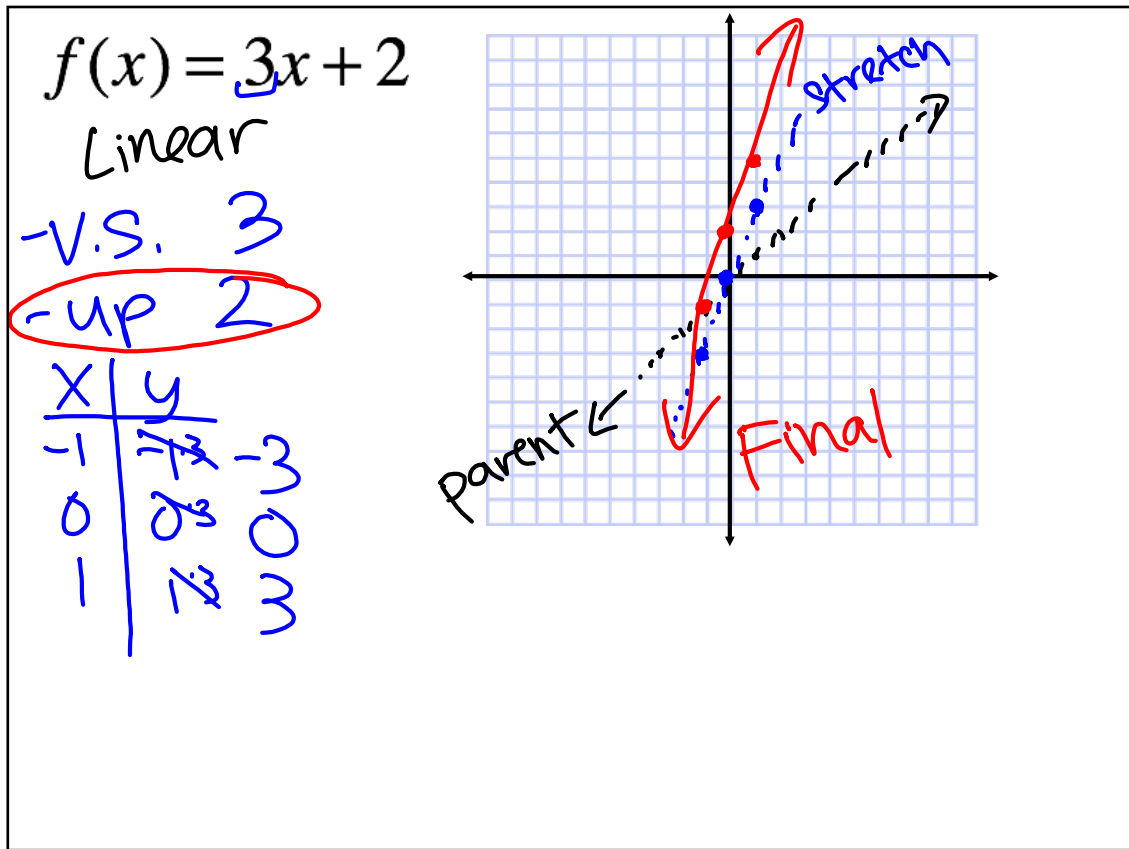

Write an equation to represent the transformed function:

-up 3
 -right 2 ✓
 -VS 3 ✓
 abs val 1 ✓
 $f(x) = 3|x-2|+3$

Write an equation to represent the transformed function:

You try!

$$f(x) = (x - 3)^2 - 5$$

$$f(x) = |x| + 2$$

abs val
-up 2

Review:

Domain
 Range
 Increasing
 Decreasing
 Left End Behavior
 Right End Behavior
 Odd/Even/Neither
 x-intercepts
 y-intercepts
 Maximum
 Minimum
 One-to-One
 Asymptotes/
 Discontinuities

Given $f(x)$ sketch a graph and analyze:

$$f(x) = 2(x - 3)^2 + 1$$
