

# 9-1 Angles and Radians Review

Book 18-1

Objectives:

I can find co-terminal and reference angles

I can convert from radians to degrees and vice versa

- If the rotation for an angle  $\theta$  is less than 1 revolution in a counterclockwise direction, then the measure of  $\theta$  is between  $0^\circ$  and  $360^\circ$ . An angle of rotation measured *clockwise* from standard position has a *negative* angle measure. **Coterminal angles** are angles that share the same terminal side. For example, the angles with measures of  $257^\circ$  and  $-103^\circ$  are coterminal, as shown.

clock-wise  
negative

$$\text{Pos} = \theta + 360^\circ$$

$$\text{Neg} = \theta - 360^\circ$$

↑  
theta

- (A) Draw an angle of rotation of  $310^\circ$ . In what quadrant is the terminal side of the angle?

- (B) On the same graph from the previous step, draw a positive coterminal angle. What is the angle measure of your angle?

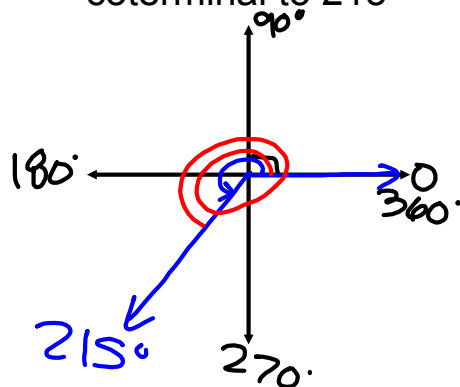

$$360^\circ + 310^\circ = 670^\circ$$

- (C) On ~~the~~ same graph from the previous two steps, draw a negative coterminal angle. What is the angle measure of your angle?

$$310^\circ - 360^\circ = -50^\circ$$

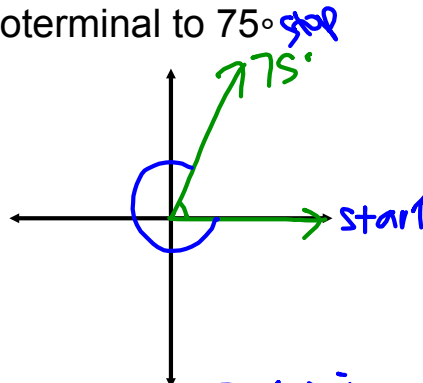

You Try! Draw and give the measure of the new angle

A positive angle  
coterminal to  $215^\circ$

$$215^\circ + 360^\circ = \boxed{575^\circ}$$

A clockwise negative angle  
coterminal to  $75^\circ$

$$75^\circ - 360^\circ = \boxed{285^\circ}$$

For each angle, find the nearest ~~two~~ positive coterminal angles and the nearest ~~two~~ negative coterminal angles.

$-102^\circ$

$$-102^\circ + 360^\circ = \boxed{258^\circ}$$

$$-102^\circ - 360^\circ = \boxed{-462^\circ}$$

$328^\circ$

$$328^\circ + 360^\circ = \boxed{688^\circ}$$

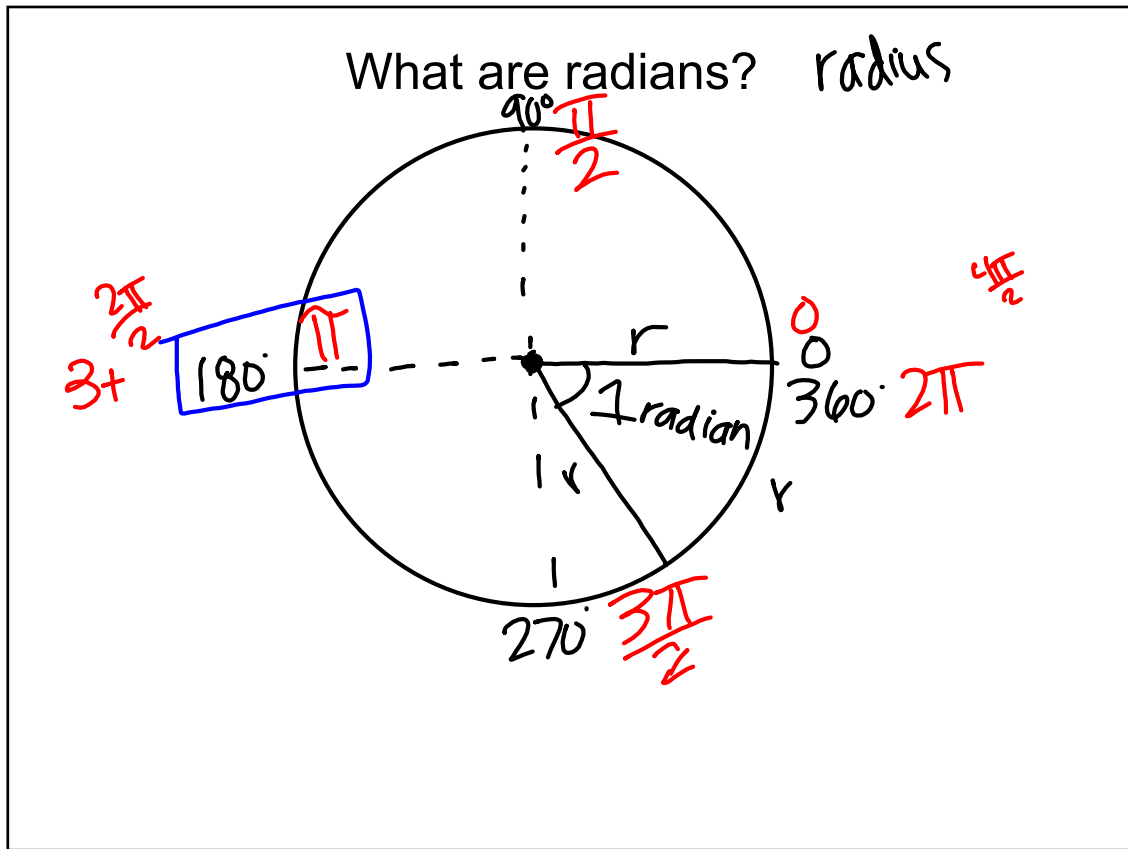

$$328^\circ - 360^\circ = \boxed{-32^\circ}$$

You Try:

$19^\circ$

$$\boxed{\begin{array}{l} 379^\circ \\ -341^\circ \end{array}}$$

$225^\circ$

radians  $\rightarrow$  fraction  
 degrees  $\rightarrow$  decimal

CONVERTING DEGREES TO RADIANs	CONVERTING RADIANs TO DEGREEs																								
Multiply the number of <u>degrees</u> by $\left(\frac{\pi \text{ radians}}{180^\circ}\right)$ .	Multiply the number of radians by $\left(\frac{180^\circ}{\pi \text{ radians}}\right)$ .																								
<p style="color: blue; font-size: 2em; margin: 0;">*</p> <p style="color: blue; font-size: 2em; margin: 0;"><math>\ominus \cdot \frac{\pi}{180^\circ}</math></p>	<p style="color: blue; font-size: 2em; margin: 0;"><math>\ominus \cdot \frac{180^\circ}{\pi}</math></p>

Degree measure	Radian measure																								
20°	$\frac{\pi}{180^\circ} \cdot 20^\circ =$ <input style="width: 50px;" type="text"/>																								
315°	<input style="width: 30px;" type="text"/> · 315° = <input style="width: 50px;" type="text"/>																								
600°																									
<span style="border: 1px solid blue; border-radius: 50%; padding: 2px;">-60°</span>																									
-540°																									
Radian measure	Degree measure																								
$\frac{\pi}{8}$	$\frac{180^\circ}{\pi} \cdot \frac{\pi}{8} =$ <input style="width: 50px;" type="text"/>																								
$\frac{4\pi}{3}$	<input style="width: 30px;" type="text"/> · $\frac{4\pi}{3} =$ <input style="width: 50px;" type="text"/>																								
$\frac{9\pi}{2}$																									
$-\frac{7\pi}{12}$																									
$-\frac{13\pi}{6}$																									

$\frac{\pi}{8} \cdot \frac{180^\circ}{\pi} = \frac{180^\circ \pi}{8\pi} = \boxed{22.5^\circ}$

$\frac{4\pi}{3} \cdot \frac{180^\circ}{\pi} = \frac{720^\circ}{3} = \boxed{240^\circ}$

$-\frac{7\pi}{12} \cdot \frac{180^\circ}{\pi} = \boxed{-105^\circ}$

$$\frac{20^\circ}{1} \cdot \frac{\pi}{180^\circ} = \frac{20\pi}{180} = \boxed{\frac{\pi}{9}}$$

$$\frac{315^\circ}{1} \cdot \frac{\pi}{180^\circ} = \boxed{\frac{315\pi}{180}} = \boxed{\frac{7\pi}{4}}$$

$$-60^\circ \cdot \frac{\pi}{180^\circ} = \frac{-60\pi}{180} = \boxed{\frac{-\pi}{3}}$$

## Your Turn

Convert each measure from degrees to radians or from radians to degrees.

$$8. \quad -495^\circ \sim \frac{-495}{180} \cdot \frac{\pi}{1} = \frac{-495\pi}{180} = \boxed{\frac{-11\pi}{4}}$$

$$9. \quad \frac{13\pi}{12}$$

$$\frac{13\cancel{\pi}}{12} \cdot \frac{180^\circ}{\cancel{\pi}} = \frac{2340^\circ}{12} = \boxed{195^\circ}$$

7. The unit circle below shows the measures of angles of rotation that are commonly used in trigonometry, with radian measures outside the circle and degree measures inside the circle. Provide the missing measures.

pos:  $\ominus + 2\pi$

neg:  $\ominus - 2\pi$

For each angle, find the nearest ~~two~~ two positive coterminal angles and the nearest ~~two~~ two negative coterminal angles.

$$-\frac{\pi}{2} \quad \frac{11\pi}{6}$$

$$\frac{-\pi}{2} + \frac{2\pi}{1} \cdot 2 = \frac{3\pi}{2}$$

$$\frac{-\pi}{2} + \frac{4\pi}{2} = \frac{3\pi}{2}$$

$$\frac{-\pi}{2} - \frac{2\pi}{1} \cdot 2 = -\frac{5\pi}{2}$$

$$-\frac{\pi}{2} - \frac{4\pi}{2} = -\frac{5\pi}{2}$$

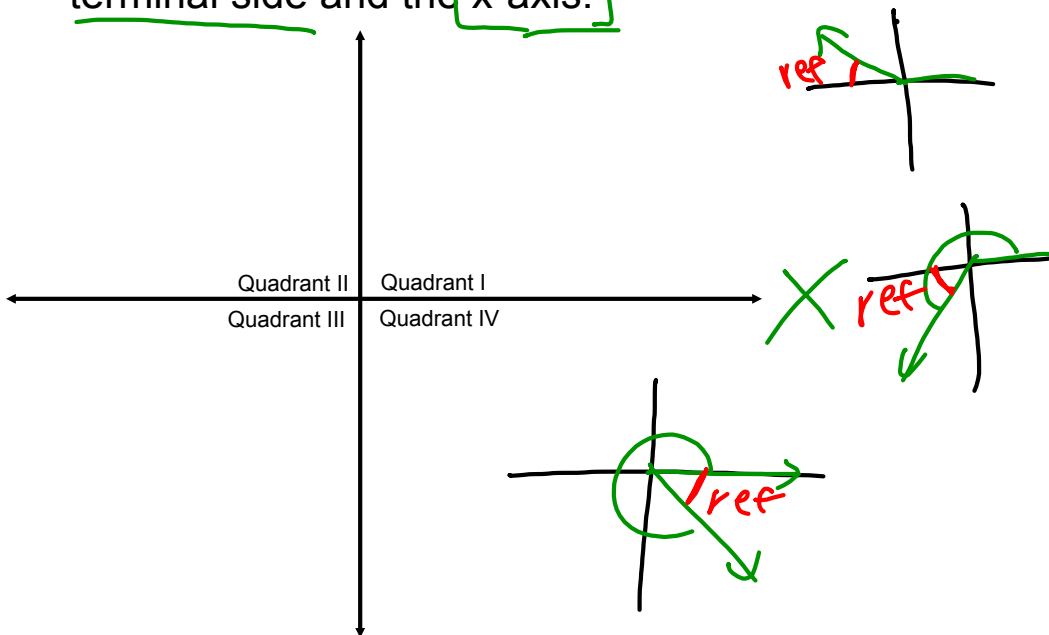

You Try:

$$\frac{2\pi}{3} \quad -\frac{\pi}{4}$$

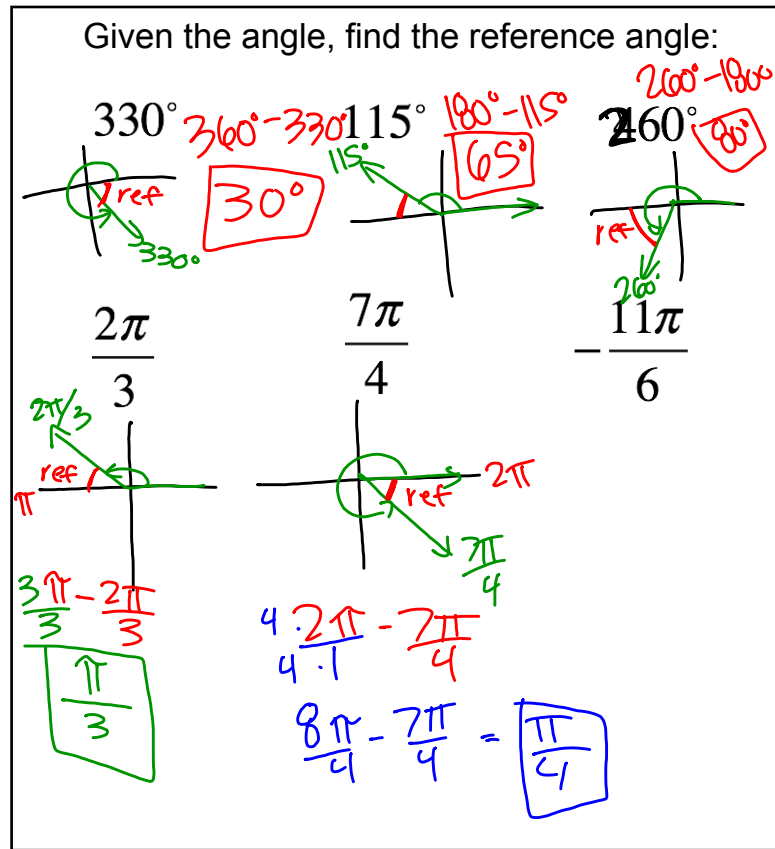

pos:  $\frac{2\pi}{3} + \frac{2\pi}{1} \cdot 3 = \frac{8\pi}{3}$

neg:  $\frac{2\pi}{3} - \frac{6\pi}{3} = -\frac{4\pi}{3}$

Reference Angles: The acute angle formed by the terminal side and the x-axis.

You try! Given the angle, find the reference angle:

$$162^\circ$$

$$\frac{5\pi}{4}$$

Reminder:

$$\text{Angular velocity} = \frac{\theta}{t}$$

Arclength:

$$\text{given in degree: } s = \frac{\theta}{360} \cdot 2\pi r$$

$$\text{given in radians: } s = r\theta$$

11. **Astronomy** A neutron star (an incredibly dense collapsed star) in the Sagittarius Galaxy has a radius of 10 miles and completes a full revolution every 0.0014 seconds. Find the angular velocity of the star in radians per second, then use this velocity to determine how far a point on the equator of the star travels each second. How does this compare to the speed of light (about 186,000 mi/sec)?

$$AV = \frac{\theta}{t} = \frac{2\pi}{0.0014} = 4488 \text{ rad/sec}$$

$$\begin{aligned} C &= 2\pi r \\ &= 2\pi 10 \\ &= 20\pi \end{aligned} \quad \frac{20\pi}{.0014} = 44880 \text{ mi/sec}$$

$$\frac{44880}{186,000} = .24 = \boxed{24\%}$$

12. **Geography** The northeastern corner of Maine is due north of the southern tip of South America in Chile. The difference in latitude between the locations is  $103^\circ$ . Using both degree measure and radian measure, and a north-south circumference of Earth of 24,860 miles, find the distance between the two locations.

$$\frac{103^\circ}{360^\circ} = \frac{x}{24860}$$

difference

Earth

$X = 7113 \text{ mi}$
